

They come out knowing the systems. They don't come out knowing where to start.

In medicine there's a standard of care: what a competent doctor must do before deciding. The repair industry has never had one. Diaforik is the standard of care for diagnosis, and your students learn it before their first job.

Training covers how every system works. Where to start when the likely fix is wrong gets picked up from whoever happens to be standing next to them — guesses and all. That's the gap Diaforik closes: a method for finding a fault and proving it, built by a paramedic turned mechanic, where you rule things out with what you can measure until one thing is left standing.

THE STANDARD

Twelve short chapters, a bit under two hours. Students go through it before their first job.

THE APP

Most techs learn the common fix first: the pattern, what fixed the last one. The app walks students through the real job in front of them. Every possible cause listed, the cheapest test that rules out the most run first, until one is left standing and proven.

THE INSTRUCTOR'S VIEW

The reasoning behind every case — what was measured, what was looked up, what was ruled out. Not just a checkbox.

What it doesn't change

No new tasks, no new hours, and nothing that touches accreditation. It sits underneath the ASE task list: the list names what a student has to be able to do; the method is how he gets there.

The app reports what happened. The instructor assigns the grade, the way he always has.

Student records

- A student's record belongs to the student.
- The instructor sees the cohort's cases, read-only, and that access ends at graduation.
- A host shop sees the job it did, and nothing else.
- Your institution's own policies for student records still apply.

THE PRICE

\$450 a student

For the whole program. One price, no add-ons.

WHAT IT COVERS

The Standard, the app, and the instructor's view for the length of the program. Every student walks out with a record of their own work that is theirs to keep.

One standard, from the first class to the first job.

Call or text about your program. The program films are at auto.diaforik.com/schools.
